

Diatomaceous earth

USES:

- to prevent bed bugs,
- to eliminate fleas
- ant problems within the home

Suggested use: Although non-toxic special caution should be taken as the dust can get down the chest so a mask is worth wearing.

Use it on your own beds and the pet beds (Making sure they are out of the room so the dust doesn't irritate) this kills any flea eggs and prevents bed bugs at the same time. Apply to a cat or dog's coat slowly and gently so dust doesn't fly around IF there is a flea infestation. Use if you have an ant issue within the home.

Ingredients: Pure Food grade Diatomaceous earth 500g

A word of caution:

DE can cause lung irritation so please be careful you and your dog don't inhale any dust. Diatomaceous earth can be drying for your dog's skin.

Although we only buy food grade DE & many use to kill a worm burden, we feel it is drying to the gut so it is not our recommendation to feed it.

Nothing stated here is to diagnose, treat or cure. Always consult a veterinarian.

This is a non-taxable product

SPECS: weight.500g
