

Flea Facts to make you itchy and scratchy!

- On the whole, fleas have four life stages: egg, larva, pupa, and adult.
- An adult flea will not come out to say “Hello” until there is a host, staying in a cocoon helps keep them safe until a bloody meal is on offer for them, like something from a horror movie, one that makes you all itchy and scratchy.
- Once a flea has eaten, they can mate, lay eggs and the whole process continues.
- Eggs take anywhere from one to ten days to hatch, weather depending. A warmer temperature and humidity is preferred.
- A female flea can lay upto 50 eggs a day.(Gross but pretty darn impressive)

Rethinking Flea and Tick Prevention

Revolutionising Natural Pet Health

Mr Slobberchops is at the forefront of innovative pet products. Our Integrative Flea and Intestinal Hygiene System, offers a multi-levelled approach to the flea and tick market, creating products for the whole dog. Introducing RollerDog (coming this July). Pocket sized, natural solutions for dogs on the go.

- **Home of the Integrative Flea and Intestinal Hygiene System for Dogs**
 - **Preventative solutions inspired by nature**
 - **Vet Approved**

Flea and Tick Collars

Our best-selling flea and tick collars provide continuous, chemical-free protection for up to 8 months. Using a gentle plant-based formula, our collars release active ingredients to deter ticks, lice, larvae and mosquitoes.

Waterproof and adjustable: one size fits all. We prefer our dogs to be naked at home, so we put the collars on when we go out for a walk. Any excess collar that you may cut off to fit size, can be put into dog bed / hoover safely secured to prevent chewing.

- **Genuine Baltic Amber Collars.**

Made from 100% Baltic amber, our all-natural collars are a chemical-free solution to deter fleas and ticks.

Our best-selling natural collars offer dual preventative action. Amber contains terpenes, which creates an uncomfortable environment for ticks. Meanwhile, wearing the collar creates mild electrostatics as it rubs against fur, also proven to deter ticks.

These collars are super handy for dogs who are too sensitive for any other preventative product.

We have customers who re-order this product again and again, due to customer satisfaction.

Can be used in conjunction with additional flea and tick products, amber collars provide an innovative alternative to the use of essential oils.

Rethinking Tick Prevention: Shampoos, Sprays and Roll-Ons

Our Integrative Flea and Intestinal Hygiene System includes our sprays, shampoos and supplements. These can be used as multi-layered solutions for dogs more prone to ticks and fleas.

- **Don't Bug Me Now Shampoo**

Based on our best-selling formula, our organic shampoo provides a naturally preventative flea and tick solution, approved by the Soil Association.

Free from sulfates, SLSSs, SLEs and parabens

- **Don't Bug Me Now Spray**

Our number 1 best-selling tick and flea prevention. Originally made for the humans, the dogs & the pony. We have recently received a review from a lovely gentleman explaining that it made his beard super soft and fluffy.....whilst we cannot advertise for use on humans, this feedback nearly made us re-think our strategy.

Apply before a walk to ward off bugs and pests.

Used in conjunction with our integrative products, the Don't Bug Me Now spray adds an invaluable layer of protection for your dog.

*** New product: The Revolutionary 'Rollerdog' (Coming July 22)**

Portable Solutions For Dogs on the go.

- **Don't Bug Me Now RollerDog**

First-of-its-kind flea and tick prevention. We are hearing of dogs being afraid of spot ons, our aim is to move away from the medical model of regular, monthly flea and tick treatments, and the fear that can come with application.

Use daily before a walk, alongside any of our other products, as part of the integrative system. RollerDog fits in your pocket, is ideal for travel and days out, and adds an invaluable extra layer of protection for the dog. Especially handy for dogs living in high tick areas, or dogs who are less robust. RollerDog is easy to apply to targeted areas.

Fleas, Ticks & Worms are every pet family's nightmare. Immune health comes from within. A healthy, robust dog is less likely to gain hitchhikers. With this in mind, we created Don't Bug Me Powder

- **Don't Bug Me Now Powder**

Made from 100% natural ingredients, our in-food supplement offers a unique combination to support your dog from the inside out. Using Adaptogenic herbs which are known for bringing the body into balance.

One or two fleas may jump on a dog every so often, a healthy dog will usually shake them off never to be seen again.

Elderly, unwell or sensitive dogs may attract a few, or more, fleas. A dog with lighter skin pigmentation could also be more predisposed, as these dogs are often more sensitive to environmental triggers or immune issues in general. Those with gut issues such as colitis, IBD or generally a sensitive tum are usually easy hosts, if gut healing is put in place things usually change for the better. As always, gut health is the number 1 challenge to address.

Our Flea, Tick and Worm Supplement was created for those dogs who need a little more, as well as those who wish for more natural preventative methods.

*This product is extremely palatable, simply add to a lovely fresh / raw diet.

5* Review

"So glad I found Don't Bug Me Now Powder, I love that I have a natural flea, tick and intestinal treatment now that's so easy to get into the dogs, I don't like the chemical treatments and regularly had trouble hiding large worm pills in their food. I'd highly recommend it and will definitely be ordering again."

5* Review

No worms.....despite Deer, no ticks!!!!

I have used a couple of different natural flea and tick products, BUT was so pleased to find one that targets worms as well. My fussy dog loves the taste, and I've not had to try to hide it I have used this product for 3 months, and have had a clear worm count. No fleas or ticks in sight, and I have deer in my garden and my dog usually has a few by now, despite using other products.
